

Advanced Data Analytics — Lecture 1b

Crash-course on the Computational Infrastructure

Simon Scheidegger

Department of Economics, University of Lausanne, Switzerland

September 15th, 2025 | 10:15 - 12:00: Internef 126 | 16:30 - 18:00 Anthropole 3185

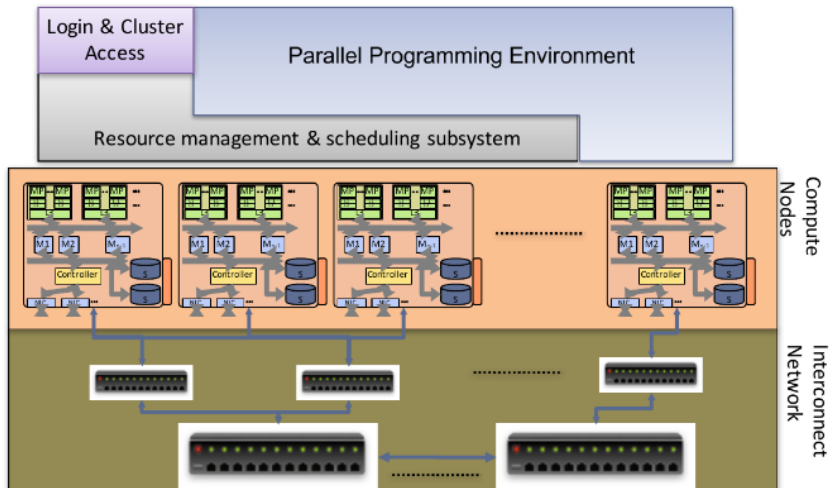

Outline

- ▶ Crash-course on the Computational Infrastructure
 - ▶ Make first steps on a Linux Cluster (Login, short overview of basic unix commands like cd, pwd, cp, scp,...)
 - ▶ Get lecture notes/codes for the lecture
- ▶ Hello World in Python

**MORE DETAILS IN THE TA
SESSION**

- ▶ For this course, we use Alphacruncher/Nuolos.cloud
- ▶ Its setup is very similar to any other system
- ▶ Register on *Moodle*, get the *enrollment key*, and open an account.

An abstract compute cluster

An abstract compute cluster

A real compute cluster

Basic Linux commands

Command	Description
<code>pwd</code>	Print name of current/working directory
<code>cd [Directory]</code>	Change directory (no directory → change to home)
<code>ls [Directory]</code>	List directory contents (no directory → list current)
<code>cat FILE</code>	Concatenate files and print on the standard output
<code>mkdir DIRECTORY</code>	Make directories
<code>mkdir -p DIRECTORY</code>	Make directories, make parent directories as needed
<code>cp SOURCE. . . DIRECTORY</code>	Copy files and directories
<code>cp -r SOURCE. . . DIRECTORY</code>	Copy files and directories, copy directories recursively
<code>mv SOURCE. . . DIRECTORY</code>	Move (rename) files
<code>man COMMAND</code>	An interface to the on-line reference manuals

Basic Linux commands

Command	Description
<code>ssh -X foo@host.com</code>	OpenSSH SSH client (remote login program), access to host.com with user foo
<code>scp foo@host.com:/home/bar ./</code>	Secure copy (remote file copy program), copy file bar from /home on host.com to directory
<code>scp bar foo@host.com:/home/</code>	Secure copy (remote file copy program), copy file bar from the local host to /home on host.com
<code>git clone git@github.com:whatever folder-name</code>	The stupid content tracker, Clone a repository (whatever) into a new directory (folder-name)
<code>git checkout</code>	Checkout a branch or paths to the working tree.
